### California Dreaming

#### *Beach Retreat with a Soul*

This garden mimics the ocean's tranquility with a restrained palate, making use of natural and recycled materials. It has a light footprint in the sand. Included are pacific coast native plants, succulents and other beach-y plants that create a habitat for native honeybees, butterflies, and hummingbirds. The style is organic modern California beach nonchalance – i.e. gnarly chic. Growing up in beach towns in California and childhood vacations in Mexico inspired this garden. This garden has outdoor rooms with design ideas to steal and a backyard beach house vibe.
